Assessment and certification standards.

In this document

01 Artificial Intelligence

Use this document with its stated edition. Applications and enquiries: contact@greatentity.com. Certificate verification: verify@greatentity.com. Certification follows an assessment and an authorized decision.

Artificial Intelligence

Organizational discipline around the use and delivery of AI.

Module scope

Named AI-enabled services or an AI management function; identify intended uses, users, model dependencies, and deployment boundaries.

Required application across five dimensions

L: assign use-case ownership and human escalation. P: define task-specific evaluation measures and operating limits. S: review release, change, monitoring, and incident controls. B: include affected users and people handling exceptions. I: verify response to drift, failures, and feedback.

Required evidence

Use-case inventory; intended-use statements; evaluation datasets and provenance descriptions; performance and limitation reports; oversight records; change approvals; monitoring and incident history; user feedback. Never infer general model safety from organizational certification.

Coverage and decision rule

Apply the common GEEF evidence period, record sampling, beneficiary-feedback protocol, scoring rubric, and mandatory gates. Record the module mapping in the evidence register. Unavailable required evidence must be resolved or the assessment deferred; it must not be silently omitted.

Certification wording

Use "Great Entity for Artificial Intelligence" only for a valid certificate that names the assessed entity, activities, locations, and GEEF version. The category name alone must not imply endorsement of activities beyond the certificate scope.
